Kurtail Gold - weed killer for control of Mares tail/Horse tail

This is a new product replacing both *Whippit* and *Kurtail* which were withdrawn from sale in February 2016. Unfortunately it is only available from the manufacturers in concentrated form which is fairly expensive costing £58. In order to make it available to our members at we are providing it in "ready to use" (RTU) sprayers. The 1 litre hand sprayer is ideal for spot spraying individual plants and if used a general weed killer will treat an area of 50 sq. metres.

Kurtail Gold RTU 1 litre Hand Sprayer sufficient for an area of 50 sq. metres **£4.50**

Kurtail Gold gives effective control of horsetail/mares tail through foliar (leaf) application. Best results are obtained by applying to approximately 20cm of healthy plant growth above ground. It is then necessary to allow the horsetail/mares tail weed to wither and die naturally before cutting or removing. If this is not possible, then a minimum of 3 weeks should elapse before cutting or removing. Any horsetail/mares tail shoots which emerge after treatment will require spraying. **Kurtail Gold** degrades after contact with the soil and crops can be planted immediately after application but it would be preferable to allow 3 days to elapse before planting or sowing. For best results treatment should be made to actively growing weeds between 1st March and 30th September. **Kurtail Gold, like any other weed killer, works only when plants are actively growing.**
